

Portfolio Management for non-life insurers

Industrialising analytical insight and cultural adoption

(The conference will be held in English)

Simon Pollack

Managing Director at Sybil Tech UK

The Institut Luxembourgeois des Actuaires is pleased to invite you to a conference hosted by Simon Pollack, an expert in portfolio management.

During the presentation, the speaker will explain how analytical insight informs human decision-making, explore the concept of the control cycle as a tool for lasting profit, and highlight the importance of using both the windscreen to look forward and the rear-view mirror to reflect on the past.

The speaker will also address the principle of temporal continuity, emphasize the importance of allocation, and discuss key aspects of decision-making, testing, transparency, and governance. To conclude, a worked example will illustrate these principles in practice.
